The Problem–Solution Fit

The **Metro Ticket Generation System in ServiceNow** addresses the challenges faced by passengers during traditional metro ticket booking. Existing ticketing methods require passengers to stand in long queues, purchase paper tickets, and wait for manual verification. This process consumes time, increases operational workload, and often results in delays during peak hours.

The proposed solution automates the entire ticket booking process using **ServiceNow Service Catalog, Flow Designer, and QR Code Generation**. Users can book metro tickets through a self-service portal by selecting the source station, destination station, ticket type, and payment method. After submission, the system automatically generates a digital metro ticket with a unique QR code that can be scanned at metro stations, ensuring a faster, secure, and paperless travel experience.

Purpose

- Automate the metro ticket booking process using the ServiceNow Service Portal.
- Eliminate manual ticket counters and reduce passenger waiting time.
- Generate a unique QR code for every successfully booked ticket.
- Enable passengers to access their digital ticket anytime through the portal.
- Improve ticket verification speed using QR code scanning.
- Reduce paper usage by promoting digital ticketing.
- Provide a secure and user-friendly ticket booking experience.
- Improve operational efficiency through workflow automation.
- Enhance customer satisfaction with a faster and reliable booking process.
